All modules of the MoQua diagnostic platform are comprised of one-part components which eliminate the need for complex instrumentation. Its unique capabilities include 1) a 96 well microplate platform for the PCR-based fluorescent probe assay, 2) an in-solution rapid FPIA assay for antibody detection in human serum/plasma samples, 3) a disposable plastic cartridge for fluorescent probe assay, 4) a disposable plastic cartridge for FPIA assay, 5) a desktop PCR machine with a camera, and 6) a software for data analysis and user interface. In Phase I, MoQua prototypes for the PCR and FP 82157476af
